

Item

implements Comparable<Item>

- name : String
- goldPeices : int
- weight : double

- + Item(name : string,
 goldPeices : int,
 weight : double)
- + getName() : String
- + getGoldPeices() : int
- + getWeight() : double
- + toString() : String
- + compareTo(item : Item) : int
- + equals(other: Item) : bool

NOTE: You may compare against the name property using the built in: `String.compareTo()`

NOTE 2: `toString()` should print the local variables as described in the documents.
